

ELO Business Solutions

ELO is designed to serve as a central database for effectively managing all company processes and information. The ELO Business Solutions range from invoice, visitor, and contract management to e-records management, offering best practice approaches to modeling business processes. Users benefit from the experience drawn from existing projects, giving them a solid basis to work with.

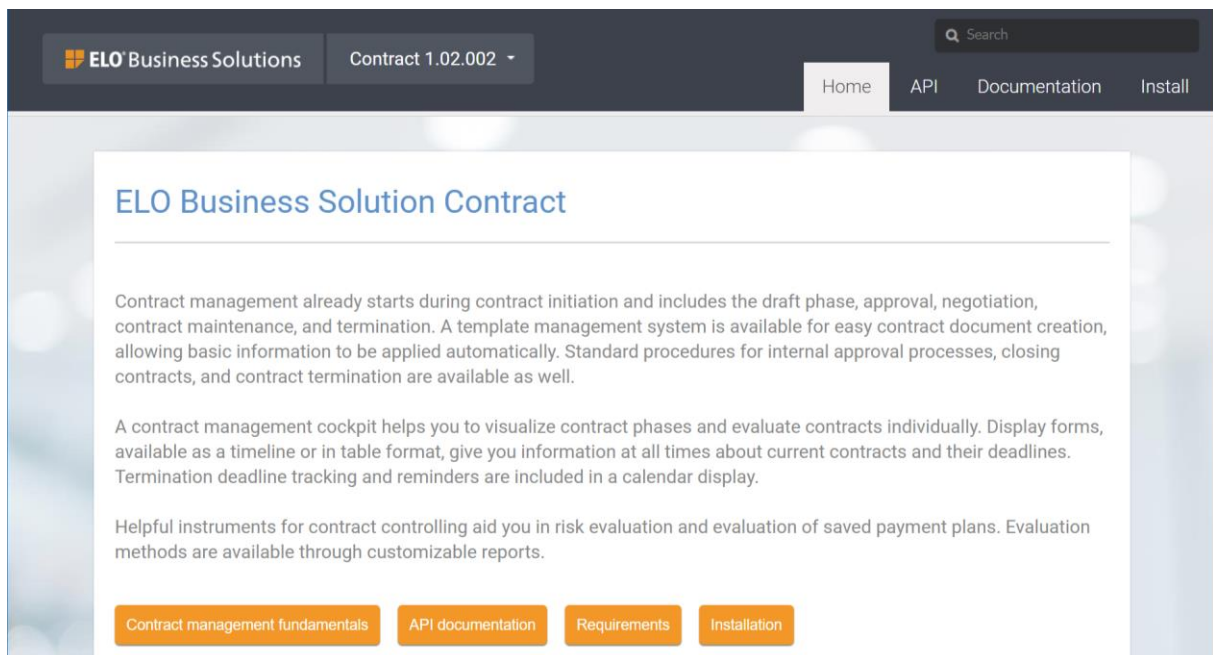

1 Documentation

Documentation in English and German is included in this package. Run the index.html file of the required language in order to open the documentation page.

ELO Business Solutions Contract 1.02.002 ▾

Home API Documentation Install

ELO Business Solution Contract

Contract management already starts during contract initiation and includes the draft phase, approval, negotiation, contract maintenance, and termination. A template management system is available for easy contract document creation, allowing basic information to be applied automatically. Standard procedures for internal approval processes, closing contracts, and contract termination are available as well.

A contract management cockpit helps you to visualize contract phases and evaluate contracts individually. Display forms, available as a timeline or in table format, give you information at all times about current contracts and their deadlines. Termination deadline tracking and reminders are included in a calendar display.

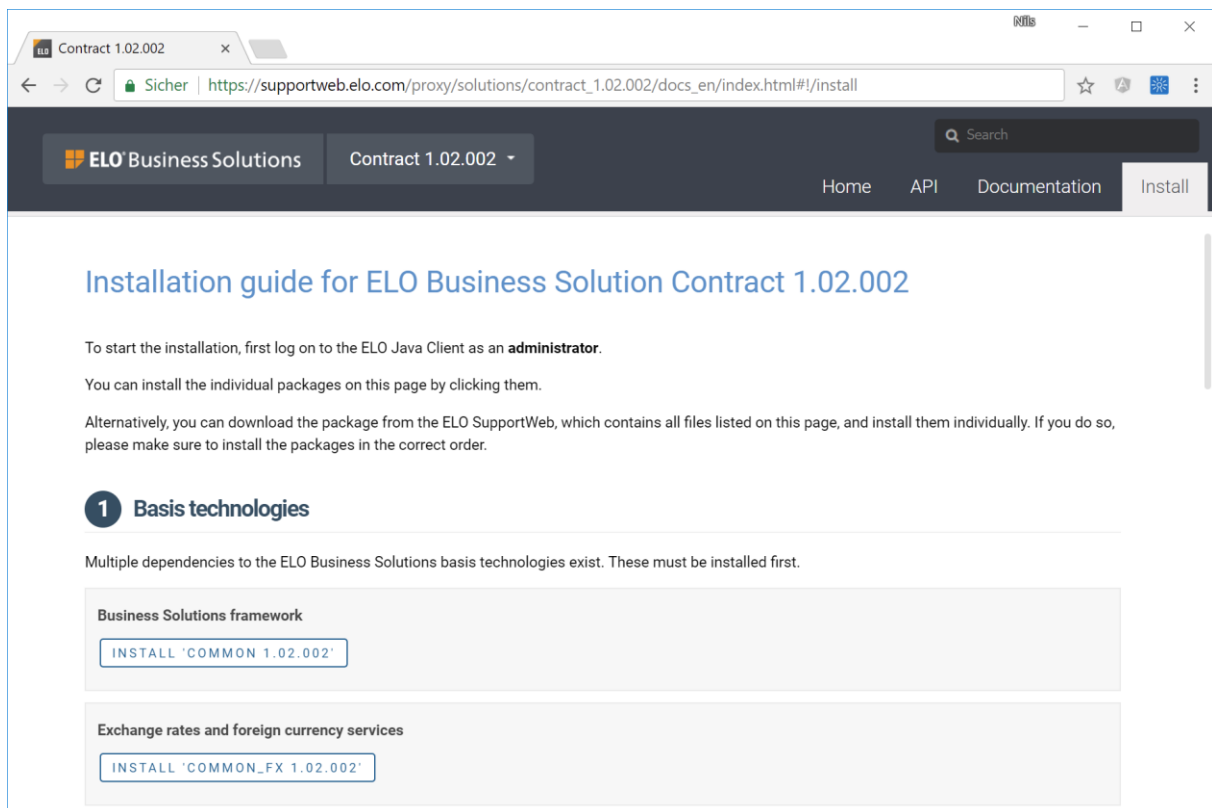

Helpful instruments for contract controlling aid you in risk evaluation and evaluation of saved payment plans. Evaluation methods are available through customizable reports.

2 Installation

Business Solutions can easily be installed using the online documentation. Before installing the solution, please verify the minimum system requirements stated in the documentation.

All packages can be installed using the installation procedure described in the documentation. In some cases where systems do not allow access to the Internet, you will find all installation files in this package.

.eloinst files can be dragged and dropped to the ELO Java Client using an administrator session. If you have any problems installing ELO Business Solutions, our support team will be happy to help.
